

## HTI Services

The HDD industry premier guidance and tooling provider to the Maxi, Mid, and Mini HDD rig markets.

### DataTraX: The Gold Standard in HDD Steering

At Horizontal Technology, Inc., innovation drives everything we do. We pioneered the first DC tracking software to use the running line or drill path as the point of reference, transforming HDD steering accuracy forever.

With DataTraX, contractors gained unmatched precision, enhanced safety, and significantly lower costs. By eliminating footage fees, it streamlined operations while solving key challenges in horizontal curves—reducing survey errors and eliminating misguided pilot holes.

Years later, DataTraX remains the industry's most accurate and best-documented HDD steering program—creating the most

accurate As-builts and data packages, DataTraX is trusted worldwide to deliver results when precision matters most.

Hand enter or import from data collector using: station & offset, away & L/R, or northing & easting

Easy horizontal and vertical curve building

Google Earth overlays

Walkover Bore planning

Walkover As-builts with automatic topography based on the depth

DataTraX CAD files can be converted into DXF files, accessible for any version of AutoCAD.

Pre-bid & pre-bore planning

Early on-site surveying and data reviews

Designed specifically for HDD

DataTraX CAD also has dedicated planning and tracking features specifically for Walk-Over HDD projects.
